

## **Yulio Technologies Announces “Jump”: Auto-create 360 VR projects directly from CET Designer**

Yulio Technologies, the leading firm in VR presentation software for commercial furniture, announced the full launch of its new “Jump” subscription which allows users to access high-performance cloud-based rendering services and create Virtual Reality presentations and 2D renderings directly from CET Designer.

Users can download Yulio’s CET Designer plugin which includes the Yulio toolbar, and with a few clicks, send the project to a high-speed rendering cloud, automatically create navigation between scenes and a floorplan to show clients how it all fits together. The project is returned in minutes and can be viewed in any browser, or with VR goggles.

“This is a game-changer for contract furniture dealerships”, said Rob Kendal, Managing Director at Yulio Technologies, “because before this, creating VR projects cost significant design and machine rendering time. Now with Jump, anyone can have a multi-scene, stunning VR project in minutes using the wonderful CET Designer tools they already know from Configura”.

Yulio Jump launched with the aim of ensuring dealers and manufacturers can use VR as an immersive presentation tool - without investing in expensive software, hardware and training. Customers increasingly want photo-realistic designs to review so they can make informed decisions. And, with many dealers and their clients working remotely, creating immersive remote presentations, a digital version of a showroom is more important than ever.

“To produce this level of realism previously, expensive software and lengthy design training was a must. With the new Yulio Jump subscription, renderings out of CET Designer will have auto-applied materials and lighting enhancements, and be able to be presented in VR with Yulio software to really wow your clients”, added Ian Hall, Chief Product Officer at Yulio.

Design is poised to be transformed by virtual reality, which provides a window on something that doesn’t yet exist and tells visual stories. “This engine creates faster, more beautiful projects from CET Designer and that’s good news for dealers working to compete with elaborate visualizations. Yulio Jump levels the playing field and creates complex virtual reality projects with a few button-clicks” added Mr. Kendal.

Yulio Jump is now available in special dealer plans starting from \$3000/year, including unlimited rendering capacity and 5 Yulio software seats for editing and presenting VR, as well as VR headsets for sharing.
